

## Math 05, Homework 7 on Sections 5.4 - 6.3

---

Write all your working out and answers on your own notepaper - no need to write the questions. Please use lots of space.

It is very important that you show clearly any work you had to do to get your answers. Just writing the answer down with no work shown is not enough. All 18 questions are worth 2 points each.

---

Do these first 10 questions and *check that your answers match the solutions on page 2*. If you don't get the same answers then try to fix them by looking at your notes or the book or asking me. Only do the last eight questions when you are sure you understand the first ten.

(1) Graph the two lines  $x + 2y = 4$  and  $x - y = 1$  on the same axes and estimate the point where they meet.

(2) Solve the system of equations:

$$2x + 3y = 11$$

$$x - y = 3$$

(3) What is the value of the  $x$ -coordinate of the solution to the system:

$$3x - 2y = 10$$

$$-4x - 3y = -2$$

(4) Find the degree and find the number of terms of the polynomial  $w^5 + 10w^3 - 3w^2 + 99w$

(5) Add the polynomials:  $x^3 + 4x - 5$  and  $2x^2 + 3x + 4$

(6) Subtract  $6y^2 - 4y$  from  $-3y^4 - 9y^2 + 10y$ .

(7) Simplify completely:  $(9x^2 - 17x + 8) - (-2x^2 - 3x + 4)$

(8) Simplify:  $(3x^4)(7x^5)(2x)$

(9) Simplify:  $\frac{24a^6b^7c^2}{3a^3bc^2}$

(10) Simplify:  $(-2x^2)^3(3x^2)^3$

---

Eight more questions<sup>1</sup>. Show clearly all your working out and reasoning.

---

<sup>1</sup>questions continue on page 2

(11) Graph the two lines  $-2x + y = 2$  and  $-x + 2y = -2$  on the same axes and estimate the point where they meet.

(12) Solve the system of equations:

$$5x + 2y = 20$$

$$5x - 3y = -5$$

(13) Find the degree and find the number of terms of the polynomial  $5x^2 - \sqrt{7}x - \frac{1}{100}$

(14) Add the polynomials:  $2x^2 - x - 5$  and  $6x^2 + 8x - 1$

(15) Simplify completely:  $(-4x^2 - 15x + 3) - (9x^2 - 6x + 5)$

(16) Simplify:  $(y^3)(5y^5)(4y^2)$

(17) Simplify:  $(-4x^3)^2(2x^4)^4$

(18) Simplify:  $\frac{a^{-3} \cdot a^6}{a^9 \cdot a^{-7}}$

---

**Answers to questions (1)-(10):**

(1)

The lines meet at the point (2, 1).

(2) Solution is  $(x, y) = (4, 1)$ .

(3) The  $x$ -coordinate of the solution is 2.

(4) The degree of the polynomial is 5 and it has 4 terms.

(5)  $x^3 + 2x^2 + 7x - 1$

(6)  $-3y^4 - 15y^2 + 14y$

(7)  $11x^2 - 14x + 4$

(8)  $42x^{10}$

(9)  $8a^3b^6$

(10)  $-216x^{12}$
