

MATH 71000 - Differential Geometry I (62226)

Professor: Luis Fernández

Office & Tel.: Rm. 4213, (212) 817-8561.

Class times and room: W: 9:30-11:00, F: 14:00 to 15:30, Rm 6417. **Office hours:** We 12-1, or by appointment.

e-mail: lfernandez1@gc.cuny.edu

Class Plan

- Each class will start with questions about the previous material and exercises.
- Students are expected to read the section assigned for each day of class in the reference given or elsewhere (please see the syllabus below) and try to solve the first few exercises of that chapter.
- Please, please, ASK QUESTIONS. Anything you ask is great, and I will answer in or out of class.
- In my opinion, the best way to understand geometry is by understanding many examples. Sometimes the computations will seem far too long. In this case, you are very encouraged to use a computer algebra program (Mathematica, Maple, etc).

Homework, Tests, etc

- Homework will be assigned each week. It is due on Wednesday of the week after.
- On Mondays we will spend some time discussing the homework assignment, as well as answering any questions that there may arise.
- Some randomly chosen exercises will be graded.
- The final exam for this class will be the Qualifying Exam in Differential Geometry at the end of May. There will be no other tests.
- Qualifying Exam samples can be found at the Math Department website, or by following the link in the course webpage above.

Syllabus

Of course, this is just a tentative plan. It will most probably change as we advance, and it will be updated accordingly.

DATE	SECTION	REFERENCE
Fr 1/28	Review of the first part of the course: Manifolds, differentiable maps, tangent and cotangent bundles, vector fields, flow, differential forms and operations with them (exterior derivative, Lie derivative, interior product by vector fields), orientation, Poincaré Lemma. Many examples: \mathbb{R}^n , S^n , \mathbb{RP}^n , $\text{Gr}(k, \mathbb{R}^n)$, Lie Groups, \mathbb{CP}^n , $\text{Gr}(k, \mathbb{C}^n)$, Homogeneous Spaces	[W], [L1]
We 2/2	Integration and Stokes' Theorem.	[L1] Chapter 14.
Fr 2/4	Integration and Stokes' Theorem.	[L1] Chapter 14.
Tu 2/9	(Friday schedule) Introduction to De Rham cohomology	[L1] Chapter 15
We 2/9	Vector bundles and operations with them. Fiber bundles.	[L1] Chapter 5
Fr 2/11	NO CLASSES SCHEDULED	
We 2/16	Riemannian Metrics	[L2] Chapter 3.
Fr 2/18	Riemannian Metrics	[L2] Chapter 3.
We 2/23	Connections	[L2] Chapter 4.
Fr 2/25	Connections	[L2] Chapter 4.
We 3/2	Connections	[L2] Chapter 4.
Fr 3/4	Geodesics	[L2] Chapter 5.
We 3/9	Geodesics	[L2] Chapter 5.
Fr 3/11	Geodesics and distance	[L2] Chapter 6.
We 3/16	Geodesics and distance	[L2] Chapter 6.
Fr 3/18	Curvature	[L2] Chapter 4.
We 3/23	Curvature	[L2] Chapter 4.
Fr 3/25	Curvature	[L2] Chapter 4.
We 3/30	An alternative view: Moving Frames	[Sp2], Chapter 7.
Fr 4/1	Riemannian submanifolds	[L2], Chapter 8.
We 4/6	Riemannian submanifolds	[L2], Chapter 8.
Fr 4/8	Gauss-Bonnet Theorem	[L2], Chapter 9.
We 4/13	Jacobi Fields	[L2] Chapter 10.
Fr 4/15	Jacobi Fields	[L2] Chapter 10.
We 4/20	NO CLASS - SPRING BREAK	
Fr 4/22	NO CLASS - SPRING BREAK	
We 4/27	Curvature and topology. Hadamard's theorem.	[L2] Chapter 11.
Fr 4/29	Another view. Principal bundles	[T] Chapters 27-31
We 5/4	Another view. Principal bundles	[T] Chapters 27-31
Fr 5/6	Another view. Principal bundles	[T] Chapters 27-31
We 5/11	Complex manifolds and almost complex structures	TBD
Fr 5/13	Complex manifolds and almost complex structures	TBD
