MATH 30 - Precalculus. Homework 5. Due Th. 03/21/2019. Professor Luis Fernández

NAME:

7

Write your answers in other sheets and STAPLE this one to your other sheets.

- 1. Do exercises 2, 4 and 6 from Exercise Set 2.5 of the book (page 335 of the 3rd edition).
- 2. Do exercises 12, 14, 22 and 24 from Exercise Set 2.5 of the book (page 336 of the 3rd edition).
- **3.** Solve the following polynomial equations. [How? We did several examples in class; or look at examples 3, 4 and 5 of the book, section 2.5.]
 - a) $x^3 4x^2 7x + 10 = 0$ b) $3x^3 - 8x^2 - 8x + 8 = 0$ c) $x^4 + 3x^3 - 20x^2 + 24x - 8 = 0$ d) $x^4 - x^3 + 2x^2 - 4x - 8 = 0$

4. Use the results of the previous exercise to factor the following polynomials completely. [NOTE: you DO NOT need to do any calculation, only use the *factor theorem*.]

a)	$x^3 - 4x^2 - 7x + 10$	b) $3x^3 - 8x^2 - 8x + 8$
c)	$x^4 + 3x^3 - 20x^2 + 24x - 8$	d) $x^4 - x^3 + 2x^2 - 4x - 8$

5. Solve the equation (x - 1)²(x - 2)(x - 3)(x + 4) = 0.
[NOTE: you DO NOT need to do any calculation for this one; use the *factor theorem* to find the solution by just looking at the equation.]

6. Do exercises 44 and 58 from Exercise Set 2.3 of the book. Do not forget to use graph paper to do the graphs.

• For the following polynomial functions, find	
1. The end behaviour.	2. The <i>x</i> -intercepts and their multiplicity.
3. The <i>y</i> -intercept.	4. Whether the function is even, odd or neither.
a) $f(x) = x^3 - 13x + 12$	b) $f(x) = -2x^4 + 2x^2$
c) $f(x) = x^7 - 3x^6 - x^5 + 11x^4 - 12x^3 + 4x^2$	d) $x^4 - 2x^3 - x^2 + 4x - 2$

8. Given the following information about the polynomial function f(x), graph f(x) in the axes provided.

	<i>y</i>
	6 5
1. <u>End behaviour</u> : The leading term of $f(x)$ is x^5 .	······ 4 •····
2. <u><i>x</i>-intercepts</u> :	3
• 1 with multiplicity 2.	1
• -2 with multiplicity 1.	
3. <u><i>y</i>-intercept</u> : $f(0) = 1$.	$\begin{array}{cccccccccccccccccccccccccccccccccccc$
4. <u>Symmetry</u> : f is not even nor odd.	-2 -
	-5 -
	\cdots

9. Given the following information about the polynomial function f(x), graph f(x) in the axes provided.

10. For the following rational functions, first find

- 1. The end behaviour and the horizontal asymptotes, if any.
- 3. The x-intercepts and their multiplicity.

- 2. The vertical asymptotes.
- 4. The *y*-intercept.

Then sketch the graph of the function in the graph paper provided (or in your own).

a) $f(x) = \frac{x+1}{x-1}$	b) $f(x) = \frac{3x^2}{x^2 - 9}$
c) $f(x) = \frac{x-4}{x^2 - x - 6}$	$f(x) = \frac{2x+5}{x^3 - 13x + 12}$

11. Given the following information about the rational function f(x), graph f(x) in the axes provided.
