This course is a **Pathways Core B (Mathematical and Quantitative Reasoning) Course:**

A course in this area must meet all of the following learning outcomes. A student will:

- a) Interpret and draw appropriate inferences from quantitative representations, such as formulas, graphs, or tables.
- b) Use algebraic, numerical, graphical, or statistical methods to draw accurate conclusions and solve mathematical problems.
- c) Represent quantitative problems expressed in natural language in a suitable mathematical format.
- d) Effectively communicate quantitative analysis or solutions to mathematical problems in written or oral form.
- e) Evaluate solutions to problems for reasonableness using a variety of means, including informed estimation.
- f) Apply mathematical methods to problems in other fields of study.

**Course Learning Outcomes**

**(Pathways Learning Outcomes contributed to)**

On successful completion of this course a student will be able to:

1. Evaluate limits at a value and at infinity by using limit laws and the Squeeze Theorem (a, b, c, e)
2. Differentiate algebraic and trigonometric functions including by use the limit definition; Product, Quotient, and Chain Rules; and implicit differentiation (a, b)
3. Use differentiation to compute instantaneous rates of change and tangent lines (c, d, e, f)
4. Compute maxima and minima of functions using calculus to solve optimization problems<sup>[1]</sup> arising in applications and other fields of study (b, c, d, e, f)
5. Model and solve related rates problems (b, c, d, f)
6. Apply methods of calculus to curve sketching (a, b, e)
7. Anti-differentiate algebraic and trigonometric functions (a, b)
8. Approximate integrals by Riemann sums (b, d, e)
9. Evaluate elementary integrals, including by use of substitution and the Fundamental Theorem of Calculus (b, d, e)
10. Compute definite integrals geometrically or using calculus to determine areas enclosed by curves (a, b, c, d, f)
